

SIMUSERV GmbH - The Art of Simulation

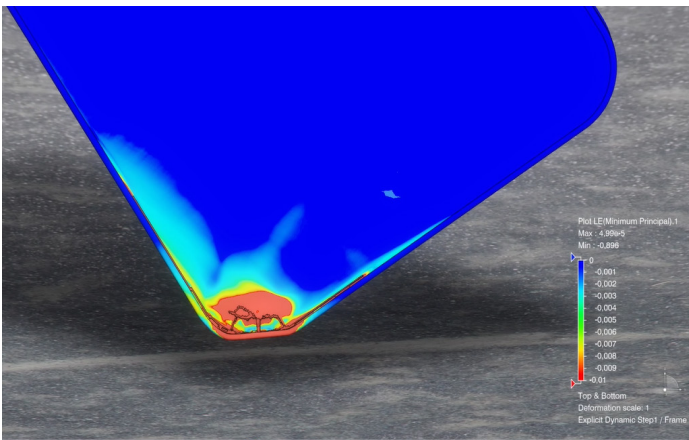

## Multiphysics Package BUY

Digital product development with CST and Abaqus for the high-tech industry

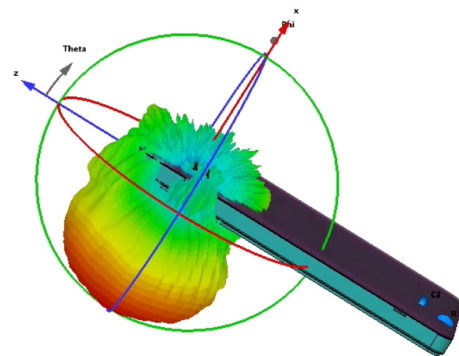

The two market-leading CAE software solutions for electromagnetics and structural mechanics have significant advantages in product development efficiency, time-to-market and cost reduction. By using digital twins, you can reduce outdated analog procedures such as drop tests or lengthy trial and error test cycles.

**Multiphysics Package BUY for experts in the virtual world**

The package BUY is focused on customers who are at home in digital product development and who have a constant need for numerical simulations of higher complexity. With this Multiphysics Package you can use our software with your own hardware. You purchase the license once and the maintenance every year, so you can plan your costs for the long term. In order to provide you with the best possible support, you will receive individual user training for CST Studio Suite and Abaqus, as well as six days of engineering advice on your issues.

Abaqus calculation of structural mechanics:  
Drop test mobile phone

CST calculation EMAG:  
Antenna radiation mobile phone

### Advantages of Multiphysics Package BUY

- Perfect for long-term cost planning
- Ideal for constant need
- On premise usage with own hardware
- Individual user training for CST and ABAQUS
- 6 days of engineering support on your task
- Purchase license fee & annual maintenance
- Enables several product variations per week
- Starts at 70k€ + 17k€/year
